

Start		Stop		Continue
Make structured yet flexible plan BEFORE I dive in		Focusing on 'stretch' features before project works		breaking down problems into small chunks
Make sure all elements of project can be synched and I know how to work them		Planning to work/add to project up to deadline, need to give some slack/wiggle room		making notes in evening for what I should do the next day/consistently update to-do list
Getting barebones features working with all frameworks/libraries/etc. AS SOON AS POSSIBLE		trying to 'refactor' and max out efficiency as i go		
use pivotal tracker for 'to-do' list				
basing project layout on rubric
